

Aura Governance Framework (v1.0, March 2026)

AURA PLATFORM

Governance Framework

Version 1.0

March 2026

Founding Architect: Muhammad Sakhawat

1. GOVERNANCE OBJECTIVE

The governance structure of Aura exists to preserve structural integrity of discourse.

Moderation is not editorial authority. Moderation exists to protect factual continuity, prevent direct harm, preserve identity-bound accountability, and maintain record stability.

Disagreement, criticism, and institutional challenge are not grounds for intervention.

2. MODERATION AUTHORITY

Aura moderation is centralized. Moderators act as structural custodians rather than content editors.

Moderators do not promote, rank, or suppress ideas. Their role is limited to preserving structural integrity.

3. CONDITIONS FOR MODERATION ACTION

Moderation may intervene only under: verified factual distortion, direct harassment or targeted personal harm, impersonation or identity manipulation, illegal material, spam or automated distortion of discourse.

Moderation does not intervene for: political disagreement, institutional criticism, controversial opinions, unpopular viewpoints, satire or rhetorical expression.

4. MODERATION PROCESS

Step 1 - Identification: content enters moderation through user reports, AI-assisted flagging, or manual review. AI signals initiate review but do not trigger automatic removal.

Step 2 - Verification: moderators verify whether structural rules have been violated.

Step 3 - Action: removal of content, request for revision, temporary restriction, or account review.

Step 4 - Notification: participants receive private notification explaining the reason for action.

Step 5 - Revision Opportunity: where possible, the participant may revise and resubmit content.

5. CORRECTION FRAMEWORK

Citizen participants may edit posts. Edits are visibly marked.

Institutional participants must issue formal correction records including date of correction, summary of revision, and updated clarification. Original statements remain visible. Silent modification is not permitted.

6. INSTITUTIONAL PARTICIPATION

Institutions participate through verified accounts. Verification confirms organizational identity.

Institutions do not receive algorithmic privilege. Institutional visibility is governed by the same chronological structure as citizen participation, with formal correction obligations.

7. PUBLIC ACCESS

Aura maintains open observation. Public visitors may read published content. Participation requires identity-bound accounts.

8. AI ASSISTANCE LAYER

AI may assist with factual cross-reference, record search, moderation triage, and correction drafting.

AI may not rank posts, alter visibility, modify discourse, or remove content automatically. Human governance remains final authority.

9. GOVERNANCE TRANSPARENCY

Moderation actions are logged internally. Institutional correction records remain publicly visible.

Governance decisions prioritize continuity of record over reputation management.

10. LONG TERM GOVERNANCE

Aura governance prioritizes stability over speed. Expansion that undermines structural integrity is considered governance failure.

The system prioritizes durable civic discourse rather than rapid platform growth.
