

AURA PLATFORM

Business Model Framework
Version 1.0 • March 2026
Founder: Muhammad Sakhawat

Business model principle

Aura operates as civic communication infrastructure. The platform prioritizes record continuity, identity-bound discourse, institutional accountability, and chronological communication.

Revenue mechanisms must not violate these principles. The following are permanently excluded: advertising systems, algorithmic amplification, engagement optimization, influencer monetization, and sponsored content.

Participation economy structure

Aura operates under a hybrid participation economy with two primary participant groups: Citizen Participants and Institutional Participants.

Citizen participation model

Citizen access remains free. Citizens may read contributions, create identity-bound accounts, publish posts, reply to discourse, and participate in discussion. Citizen participation is not monetized directly; citizens create the discourse environment that generates civic value.

Institutional participation model

Institutions represent the primary revenue layer. Institutional accounts provide verified institutional identity, official statement publication, formal correction record infrastructure, document attachments, institutional communication archive, and structured dialogue with citizens.

Institutional account tiers

Tier	Features	Estimated range
Basic Institutional Presence	Verified institutional profile; official post capability; \$200 per month	\$200 to \$500 / month
Advanced Institutional Presence	Extended document hosting; institutional dashboard; \$1,000 per month	\$1,000 to \$5,000 / month

Verification services

Verification confirms institutional identity and may include organizational authentication, role confirmation, and a public identity badge.

Estimated maintenance fee: \$100 – \$500 annually.

Research access model

Aura generates structured discourse archives. Research institutions may request access to historical discussion records, policy discourse datasets, and institutional communication archives.

Potential pricing range: \$5,000 – \$25,000 annually.

Civic dialogue infrastructure

Aura may host structured public dialogue between institutions and citizens (policy discussion series, academic debates, public research forums).

Pricing model: \$10,000 – \$50,000 per hosted dialogue program.

Long-term infrastructure contracts

Institutions or governments may adopt Aura as official communication infrastructure (municipal civic dialogue, public policy consultations, institutional communication archives).

Contract range: \$50,000 – \$250,000 annually.

Revenue development timeline

Phase	Focus	Revenue
Phase 1 (Early Platform Stage)	Platform stability; citizen contributors; discourse verification	Minimal or none
Phase 2 (Institutional Entry)	Verified institutions; initial institutional accounts	Institutional subscriptions
Phase 3 (Infrastructure Adoption)	Research partnerships; institutional communication infrastructure	Institutional contracts; research access
